SKILLS

Frontend	HTML5, CSS3, Bootstrap Javascript, JQuery.js React.js
API	JSON, AJAX
Data	MYSQL, MongoDB
Server	Node.js, Express, MERN Stack
Other	Python

SUMMARY

Full Stack Web Developer with a Bachelor of Science in Biochemistry at the University of Ottawa and a certificate in Full Stack Development at Carleton University. Exceptional problem solving skills, able to thrive in a team environment and a strong desire to learn. Technical abilities include: developing attractive user interfaces, implementing APIs, and making use of databases and servers.

PROJECTS

COVID-19 Tracker

[Live Site](#)

[Github Repo](#)

The COVID-19 Tracker retrieves the latest data regarding cases of COVID-19 and displays a graphical representation. It also provides the user with the most recent news updates. My role consisted of developing a script that would obtain the data and display it in a graph. This was all done with MaterializeCSS, HTML5, Javascript, Chart.js, a COVID-19 API, and the NYT API.

Weather Forecast

[Live Site](#)

[Github Repo](#)

This application makes use of a weather API to display the 5-day weather forecast for a specified location. I was tasked with developing the user interface in HTML and Bootstrap, while also using Javascript to fetch the data and create functionality.

Daily Planner

[Live Site](#)

[Github Repo](#)

In this program, a user can enter their daily activities into a day planner, which they can then save to record important events throughout their day. To develop this application, I used Bootstrap and HTML for the front end and javascript to make the elements interactive.

EXPERIENCE

Barista

(Starbucks| Ottawa, ON| Jan 2020 - Present)

- Served customers in a very fast-paced, high intensity work environment
- Acquired knowledge to provide outstanding customer service
- Developed teamwork collaboration and cooperation skills
